LATE CABLES

Estimated 1934 production revised as follows with 1933 comparisons in parentheses; England and Wales, wheat 65,256,000 bushels (58,725,000), barley 33,942,000 (29,456,000), oats 78,126,000 (85,820,000), potatoes 128,381,000 (129,845,000); Scotland, wheat 4,152,000 bushels (3,472,000), barley 4,180,000 (2,660,000), oats 45,125,000 (48,580,000), potatoes 38,323,000 (40,208,000). (International Institute of Agriculture, Rome, December 12, 1934.)

Australian wheat crop condition mediocre in Western Australia and yield generally below normal on account of lack of rain and rust attacks. In South Australia the condition generally improved. Harvesting has been delayed in New South Wales by too much rain. In Victoria the condition is fair to good. Slight damage is reported from locust attacks in South Australia, New South Wales and Victoria. (International Institute of Agriculture, Rome, December 14, 1934.)

CROP AND MARKET PROSPECTS

GREAD GRAINS

Current changes in wheat and rye production estimates

The estimated 1934 wheat crop was increased slightly during the past week by revisions for Hungary and Rumania, the slight reduction for the former country having been more than offset by the increased estimate for the latter. The total for 44 countries reporting now stands at 3,033,764,000 bushels as compared with 3,338,176,000 bushels produced by the same countries in 1933. The total rye estimate for 26 countries was likewise increased by new figures for Hungary and Rumania to 873,226,000 bushels, which compares with 1,027,667,000 bushels harvested in 1933.

Crop notes from the Southern Hemisphere

Heavy rains fell over the greater part of the <u>Argentine</u> grain zone in late Hovember and early December, according to a cable from Agricultural Attache P. O. Nyhus at Buenos Aires. No damage to the wheat crop was apparent in the southern half of the wheat-growing area, where, although somewhat late, the crop is in the best condition noted in many years. In Santa Fe and Cordoba, however, where some 40 percent of the Argentine wheat acreage is located, too much rain and considerable lodging have lowered both the quantity and the quality of the crop. Harvesting operations in both provinces have been complicated. The prospect for a good flaxseed crop has also been reduced by excessive rains in some districts.

Harvesting was delayed by rains over wide areas of Australia, according to trade reports, but the weather cleared in early December and the outturn is still placed at 130,000,000 bushels. New wheat was moving in small volume only, but it appeared to be of excellent quality.

The Danube Basin wheat situation

Fall seedings of wheat in the Danube Basin for harvest in 1935 were practically completed by the middle of November, according to the Belgrade office of the Foreign Agricultural Service. Sowing operations usually continue in some parts of the Basin until Christmas but good weather favored field work this season. For this reason and because of the relatively high wheat prices maintained by government organizations in all the Danubian countries, the 1935 acreage sown to winter wheat is expected to exceed that of 1934, which totaled around 15,000,000 acres. While numerical data are not yet available, the Belgrade office places the increase in Bulgaria, Hungary, and Yugoslavia at from 3 to 5 percent. In Rumania, the 1935 winter wheat acreage is expected to exceed that of 1934 by 20 percent, due to the fact that wheat prices this fall have been so much higher than prices of other grains. But the fall-sown area of 1934 was considerably below average, totaling only about 6,200,000 acres. Seedings this season are placed by the Rumanian Ministry of Agriculture between 7,400,000 and 7,863,000 acres, the latter being the postwar record acreage for winter wheat which was sown in the fall of 1930.

The early plantings of wheat have made good progress, and excessive growth was reported in some of the southern regions of the Basin. This was checked, however, by cold weather in late November, as was the first appearance of rust, which was noted around the middle of the month. No serious damage by insects was evident, but field mice were numerous in some districts.

The 1934 wheat crop of the Danube Basin is still estimated at 255,366,000 bushels by the Belgrade office though officially the crop is placed somewhat under this figure. The exportable surplus for the 1934-35 marketing year is likewise maintained at 29,395,000 bushels. Exports during July-October totaled only 8,231,000 bushels, the greater part of which came from Hungary and Yugoslavia. Hungarian wheat went mostly to Austria but in small quantities to Italy also; Yugoslav was taken by Czechoslovakia and Germany. Although November shipments were speeded up to some extent in anticipation of the cessation of river navigation, Danubian wheat is not expected to move in any great volume until next spring, when rivers will be open again and stocks in importing countries will be depleted.

In November, after the corn harvest and the completion of winter seedings, Danubian farmers were able to deliver wheat in larger quantities, but government agencies were successful in preventing any downward tendency on the wheat market, and prices remained unchanged during the month. Government purchases were continued by the various organizations set up for this purpose, with no new developments in government aid reported by the Belgrade office. Purchases of Hungarian wheat for export to Austria, in accordance with the agreement made at Rome, totaled 4,115,000 bushels by October 23.00f this

amount, 2,517,000 bushels had been actually delivered, and the price paid for high-grade wheat was above the minimum provided for in the agreement. Some 5,500,000 bushels of wheat and 562,000 barrels of flour were to be purchased by Austria, while 7,349,000 bushels of wheat were to be taken by Italy. Negotiations are said to have been concluded whereby flour deliveries to Austria and wheat shipments to Italy have now begun.

The Shanghai wheat market

Wheat and flour prices on the Shanghai market continued to advance during the week ended December 7, due to the expectation of increased duty on wheat imports, according to the Shanghai office of the Foreign Agricultural Service. Present flour prices favor the purchasing of foreign wheat but most of the millers are said to be unwilling to take the risk of paying higher duty. Two cargoes of old-crop Australian wheat were booked during the week at about 72 cents per bushel. Since December 1 half of the Shanghai mills have not been running because of the shortage of wheat and the inactive demand for flour. Flour stocks were placed at 800,000 bags.

Wheat quotations, c.i.f. Shanghai duty included, were reported as follows: Australian (old crop) 73 cents per bushel; Argentine 78 cents; domestic standard for December delivery 74 cents, January delivery 76 cents per bushel. Domestic flour for December and January delivery was 86 cents per bag of 49 pounds. Australian flour, c.i.f. Hongkong, was \$2.67 per barrel of 196 pounds.

The American Vice Consul at Dairen reported October imports into that port as follows: Japan 691,000 bags, Australia 1,304,000, Shanghai 36,000, Chosen 12,000, total 2,043,000 bags.

Rye and maslin in the Danube Basin

Influenced by unusually mild weather, fall seedings of rye and maslin were completed very early this season, according to the Belgrade office of the Foreign Agricultural Service. Although estimates are not yet available for the Basin, it is thought that the winter acreage sown for the 1935 rye and maslin crop will be larger than that sown for the 1934 crop, which amounted to only about 3,700,000 acres. The Ministry of Agriculture estimated the area sown in Rumania to rye and maslin at 951,000 acres as compared with 848,000 acres sown in the fall of 1933, but the Belgrade office is of the opinion that increases in the other Damubian countries will not be so great. The condition of the crop is generally good, although the continued warm weather resulted in excessive growth in some districts and rust had appeared, both of which were checked by cold weather in late November.

The 1934 rye and maslin crop in the Danube Basin is still placed by the Belgrade office at 49,210,000 bushels, and the exportable surplus at

_ _ _ _ _ .

about 2,400,000 bushels. Exports during July-November totaled only a little over 900,000 bushels, since Austria recently imported Polish rye rather than Hungarian. Rye prices in Hungary declined for this reason, in early November, but they recovered with the resumption of imports to Austria later in the month. Prices in the other Danubian countries remained practically unchanged during November.

FEED GRAINS

Summary of recent feed grain information

The condition of the barley crop in Poland as of November 15 was slightly better than a month earlier, and better than at the same time a year ago.

The yields of the new barley crop in Argentina are especially promising, although extensive lodging is feared. The oats crop is also in good to excellent condition. The United States is continuing to purchase oats from Argentina. Argentina is also selling some corn, both old and new crop, to the United States. There has been some difficulty in the securing of spot corn in the port of Buenos Aires, and to some extent at other points. Only a part of the remainder of the old crop is in good condition. Some relatively important premiums were reported from Europe on corn which was loaded a few weeks ago. Prospects are favorable for the 1934-35 crop when it comes onto the market.

Conditions have been favorable for the ploughing and planting of the new corn crop in the Union of South Africa. The area planted to corn in Kenya shows a distinct increase over that of last year.

FRUITS, VEGETABLES, AND NUTS

Morway reduces duty on apples and pears January 1

The Norwegian Government has announced that the low duty on apples and pears, usually effective for the months of February to July, inclusive, will come into effect this season January 1 instead of February 1, according to cabled advices from Consul General Thomas H. Bevan at Oslo. The rate for the months August to January, inclusive, is ordinarily 40 ϕ re per kilogram plus surcharges. These surcharges bring the rate to 72 ϕ re per kilogram (\$3.62 per bushel at current rates). During the remainder of the year the rate is 20 ϕ re per kilogram plus surcharges, or 36 ϕ re (\$1.82 per bushel). The low rate is made effective earlier this season because of the

poor domestic apple crop. This should be of considerable value to United States exporters since the duties in Norway are extremely high. Even the lower rate is equal to about 100 percent ad valorem on the laid-down value of the fruit.

British markets take less barreled apples

Arrivals of barreled apples on British markets during the third week of November were lower than during the preceding weeks, due probably to the lower prices prevailing on most European markets, according to a report from F. A. Motz, Fruit Specialist in London. Even Liverpool and Glasgow, which markets are usually not easily affected by local offerings, followed the general tendency toward lower levels. Nova Scotia has been the chief source of barreled apples, with British Columbia furnishing the bulk of boxed fruit. English dessert apples are practically cleaned up, but the heavy weight of cooking sorts is not moving rapidly into consumption, and consequently hangs as a cloud over the market and keeps values depressed.

The present demand centers around colored apples with little attention paid to the green sorts. Starks, Greenings, Ribstons, and similar varieties, although in excellent shape, are disposed of at low prices. With the market already well supplied with home-grown cooking apples, which are selling at low levels, there is no interest in imports of such varieties. Starks and Greenings should never be sent to England before the end of January, even in normal crop years. At that time they will bring three to four times the November and December values. A few parcels of Yorks and Stayman Winesaps in excellent condition were sold in the London auction during the week under survey, with active competition. The fruit was well colored, of good, bright appearance, and paper packed. California Newtowns sold well, due to the fact that few operators would have more shipments arriving before Christmas. Hood River Newtowns were in better demand also, but some of the larger sizes were sold at reduced prices because of the unsound condition. Demand and prices were expected to improve as Christmas drew nearer.

Canadian imports of American fruit in 1933-34

Canadian imports of American fruits and vegetables in the 12 months! period ended August 31, 1934, were about the same as the preceding year but the value was slightly greater, according to a report from Damon C. Woods, American Consul at Toronto. Fruit and vegetable imports were valued at about \$13,272,000 against \$12,848,000 in the preceding year. Imports of fresh fruits were valued at \$8,654,000 against \$8,657,000 in 1932-33. The decline was mostly due to a fall in banana imports (transshipped) since imports of grapes, grapefruit, lemons, oranges, pears, and strawberries from the United States were larger. Imports of dried fruits were worth \$1,762,450 against

\$1,445,023 last year and the volume was 32,046,000 pounds against 31,064,000 pounds last season. Prunes accounted for one half and raisins for one third of the totals. Preserved fruits increased from \$98,845 to \$140,617. Imports of fresh vegetables from the United States rose from \$2,504,000 to \$2,673,000, while canned vegetables dropped from \$85,227 to \$62,498, and pickles and sauces declined from \$57,604 to \$40,035.

There has been a decline in the fruit and vegetable trade with Canada in the last few years, which is partly a result of the depression but mainly due to higher duties in that country. The duties were designed chiefly to help Empire countries. Little stimulation in the imports of fresh fruits and vegetables has occurred as a result of this policy but there has been a considerable increase in imports from Empire countries in some of the canned and dried fruit items, and a decline in such imports from the United States. Raisins, which used to come largely from California, are now supplied chiefly by Australia. The latter supplied 70 percent in the season under survey. Canned fruit is now largely supplied to Canada from Empire countries. Straits Settlements and Australia furnish most of the pineapple, and canned peaches come mainly from Australia.

LIVESTOCK, MEAT AND WOOL

London wool sales close with prices tending downward

The sixth series of London Colonial Wool Sales which opened on November 20 closed on Tuesday, December 11, with prices for most grades on a par with or below the closing rates of the preceding series on October 3, according to a cable from Agricultural Attache E. A. Foley in London. Competition throughout the sale was stronger than expected and was helped considerably by some German orders during the last two days of the series. Offerings during the sale, however, were about 25,000 to 30,000 bales less than originally intended.

Compared with closing prices of the previous series, greasy merinos were 5 percent lower, fine crossbreds par, medium and low crossbreds 7.5 percent lower, lambs wool merinos par, and crossoreds 5 percent higher. Scoured merinos closed at par to 5 percent lower, crossbreds at par, lambs wool slipes at par and sheep slipes 5 percent lower. Capes closed 5 percent higher and Punta Arenas 5 to 7.5 percent higher.

The first series for 1935 will open in London on January 15.

UNITED STATES AGRICULTURAL TRADE WITH TERRITORIES

Trade with Puerto Rico, Hawaii and Alaska is supplementary to and not included with the regular export and import statistics of the United States and for this reason is published as a separate compilation.

During the year ended June 30, 1934, purchases of farm products by the United States from these three territories as a whole were valued at \$153,292,-000, a gain over 1932-33 but 13 percent less than the 1925-26 to 1929-30 average. Shipments of agricultural products from the United States to Puerto Rico, Hawaii and Alaska, for this same period were valued at \$43,221,000, an advance over the two preceding years but less than the average value for 1925-26 to 1929-30 which amounted to \$58,536,000, or a decrease of 24 percent.

Alaska

Outside of a little reindeer meat and unmanufactured wool, very few agricultural products are shipped to the United States from Alaska. However, during 1933-34, these purchases were valued at \$6,185,000 as compared with \$4,920,000 during 1932-33, a gain of 26 percent, and an average of \$9,215,000 during 1925-26 to 1929-30, or a decrease of 33 percent. Beverages, sugar, butter, fresh beef, cured pork, all kinds of canned foodstuffs, dried fruit, and wheat flour were the leading agricultural products purchased by Alaska. Alaska purchased more than four times as much in beverages and fruit juices as during the preceding year, the total amounting to 688,000 gallons, valued at \$871,000 as compared with 161,000 gallons, valued at \$194,000 during 1932-33.

Hawaii

During 1933-34, shipments of agricultural products from Hawaii to the United States were valued at \$87,069,000, a gain over the preceding twelve months, but a decline of 16 percent when compared with the average for 1925-26 to 1929-30. Of the 1933-34 total, 67 percent was sugar and 30 percent canned pineapple. Shipments of sugar amounted to 924,000 short tons, a decrease in volume when compared with the three preceding years but otherwise one of the largest on record. Shipments of canned pineapple to the United States show a generally rising trend, the total for the year just closed amounting to 457,979,000 pounds. Some coffee and molasses also came from Hawaii.

Agricultural products shipped to Hawaii during 1933-34 were valued at \$16,643,000, a gain over the two preceding years but considerably less than the 1925-26 to 1929-30 average. Rice, was the most important single item sent to the Hawaiian market during 1933-34, the total amounting to 86,336,000 pounds valued at \$3,072,000, a recession in volume when compared with the three years immediately preceding but due to rising prices recording a noticeable gain in value. The last year has witnessed also a decided gain in the value of beverages going to Hawaii, the total amounting to \$1,604,000, or almost five times the value of these purchases in 1932-33.

UNITED STATES AGRICULTURAL TRADE WITH TERRITORIES, CONT'D

Mill feeds rank third in importance, the total valuation in 1933-34 reaching \$1,401,000 as compared with \$1,264,000 a year ago. Hawaii also takes large quantities of canned meats, milk, vegetables, frozen pork, and beef.

Puerto Rico

During the year ended June 30, 1934, shipments of agricultural products to the United States from Puerto Rico made some gain over the previous year's level but otherwise was the smallest since 1928-29. Sugar represented \$54,823,000, or 83 percent of these shipments, unmanufactured tobacco \$6,329,000, or approximately 10 percent, fresh and canned grapefruit \$1,361,000, fresh and canned pineapple \$1,090,000, and coffee \$647,000. Puerto Rico supplied the United States with 828,000 short tons of sugar, which was lower than the peak reached during 1931-32 but an increase of 40 percent over the 1925-26 to 1929-30 average when the shipments amounted to 592,000 short tons.

Sales of agricultural products to the Puerto Rican markets were above the low level of the two preceding years, the total standing at \$20,393,000. Puerto Rico took a large share of American-grown rice, that total standing at 197,229,000 pounds of rice grain and 4,962,000 pounds of rice flour, meal and broken rice, which was less than during the preceding year, but a distinct advance in comparison with the 1925-26 to 1929-30 average.
